822 Heat and Air Expands Commercial HVAC Repair and Installation Services Across DFW

August 25, 2026

Benbrook, TX - August 25, 2026 -
822 Heat and Air has expanded its commercial HVAC installation and repair services to better serve businesses throughout the Greater DFW Metroplex and surrounding suburbs. The expansion addresses growing demand from commercial property owners seeking reliable climate systems that support comfort, productivity, and energy efficiency across the region.

As a commercial HVAC company based in Texas, 822 Heat and Air specializes in complete heating, ventilation, and air conditioning solutions for large-scale commercial facilities as well as residential properties. The expanded service offering covers the installation of high-efficiency central air systems, rooftop units, split systems, advanced ventilation systems, precision-engineered ductwork, energy-efficient heat pump systems, and comprehensive chiller system installations.

The expansion also strengthens the company's capacity for commercial HVAC replacement and ongoing service. With a team of certified technicians, the company handles projects from initial consultation through

post-installation maintenance, focusing on systems that reduce operational costs and support more sustainable building environments.

David, a spokesperson for 822 Heat and Air, said the expansion reflects the changing needs of commercial clients across North Texas. "Commercial facilities across the Metroplex depend on climate systems that run efficiently through demanding Texas conditions," David said. "Broadening the scope of installation and support allows the team to meet those needs with precision and consistency, whether a business is upgrading an aging system or building from the ground up."

The expanded services address the full lifecycle of commercial equipment. In addition to new installations, the company provides HVAC repair for facilities experiencing performance issues or unexpected breakdowns, helping businesses limit downtime and maintain stable indoor conditions. The integration of building automation systems is also part of the enhanced offering, giving property managers greater control over energy use and system performance.

"The priority is dependable performance and clear communication at every stage of a project," David added. "That approach applies equally to a routine repair and to a large multi-unit installation. Commercial clients need systems that work and a team that stands behind the work."

As a commercial HVAC contractor, 822 Heat and Air emphasizes energy-saving solutions that lower long-term operating expenses while contributing to a greener environment. The company's technicians carry certifications intended to ensure that each system is installed and serviced with attention to detail and long-term reliability.

822 Heat and Air serves commercial and residential customers throughout Crowley, Burleson, Benbrook, Granbury, Joshua, Godley, Cleburne, Alvarado, Fort Worth, Arlington, Dallas, and the wider Greater DFW Metroplex and suburbs. The expanded commercial capacity complements the company's established residential offerings, which include system installation, repair, ductwork, and seasonal AC tune-up services.

822 Heat and Air is a professional heating, ventilation, and air conditioning company that provides both commercial and residential services. The company offers a range of solutions including commercial HVAC, residential HVAC, ductwork, and AC tune-up service, along with financing options subject to credit approval and offer eligibility. The company operates under license number TACLA65080C and works to keep clients' properties comfortable and energy-efficient throughout the year.
